➤ Profile Application Workbench

Rapid Profile Development with State-of-the-art Tools

Profile Application Workbench is a state-of-the-art application development environment for the Profile core banking system. Building on the industry's most popular open source tooling platform, the workbench provides developers with valuable functions and features needed to rapidly build and enhance components of Profile.

➤ Profile Application Workbench's integrated connectivity to Profile provides a seamless and smooth workflow process. **Manage editing workspace and multiple connections for Profile run-time environments.**

Developers of all skill levels benefit from Profile Application Workbench's productivity-enhancing features, such as quick access to programming standards and help documentation, integration with code repositories and run-time environments, hot-key inserted code snippets, as well as a modern and ergonomic user interface.

Features

Profile Application Workbench includes the following features:

Profile Connectivity

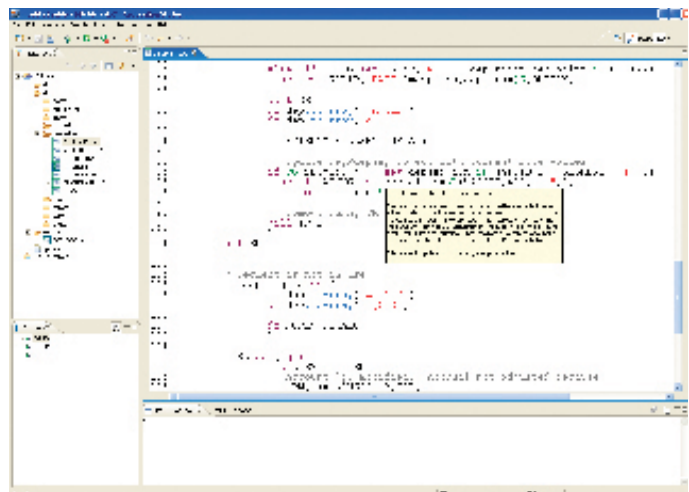

Projects in Profile Application Workbench allow users to manage editing workspace at various levels of granularity and maintain a connection to a Profile runtime environment.

Editors

Profile Application Workbench comes with editors for the Profile Scripting Language (PSL), GT.M™ and Java™. The editors provide color coding and integrated Profile connectivity functions.

Hover Help

By simply hovering the mouse cursor over any table column reference the workbench will pop up a full description of column.

Hot-key Enabled Snippets

Quickly insert commonly used code snippets with hot-key enabled PSL snippets. To facilitate knowledge sharing and reuse, PSL snippets can be exported to share between team members.

Outline View

Outline View provides quick access to line tags in PSL and M programs. Large programs are more easily navigated by arranging the outline view in alphanumeric order with the click of a button.

Task Management

Development tasks, like fixing compile errors and warnings are automatically managed by Profile Application Workbench. Create to-do lists and attach them to specific lines of code.

Send To Profile

Profile Application Workbench simplifies the task of sending a resource to Profile.

Get From Profile

Profile Application Workbench uses a wizard to guide users through the process of getting a resource from Profile. Look-up tables allow wild-card searches to help users find Profile resources faster.

New Profile Resource

Profile Application Workbench uses a wizard to guide users through the process of creating a new resource.

Database Independence Support

Move configuration data between Profile runtime environments with the Database Independent Data file format.

Benefits

Increased Productivity

Profile Application Workbench integrates development functionality with connectivity to Profile run-time environments. Tight integration with Profile and rapid extendibility help optimize productivity. In addition, powerful file search capabilities increase predictability and decrease development time, reducing coding errors.

Rapid Development

Building Profile Application Workbench on top of the Eclipse Project platform allows for rapid application development of productivity enhancing tools. In addition, these tools leverage the familiarity of the Profile development staff

with product functionality, reducing the amount of necessary customization and decreasing development time.

Reduced Training Costs

Profile Application Workbench can be used with all Profile applications, standardizing tools and procedures.

Flexibility

Based on modern standards, Profile Application Workbench eliminates the need for inflexible, green-screen editors.

Application Studio

Application Studio is a suite of productivity-enhancing tools based on the Eclipse™ platform. Within the suite are workbenches supporting applications offered by FIS.

- TouchPoint Workbench
- Xpress Application Workbench
- Profile Workbench

Eclipse is an open-source community whose projects are focused on providing a vendor-neutral open-development platform and application frameworks for building software.

The Eclipse Foundation is a not-for-profit corporation formed to advance the creation, evolution, promotion, and support of the Eclipse Platform and to cultivate both an open-source community and an ecosystem of complementary products, capabilities and services.
