

Hosting Services

With more than 40 years' experience in managing and delivering ASP services and technology solutions, FIS offers hosting solutions to optimize your business performance. FIS' managed hosting services, co-location services and Web hosting services are designed to offer the flexibility to meet your unique business needs today and in the future.

Co-Location Services

FIS offers hardened data center infrastructure in which clients can locate and manage their computing assets. With co-location services, you gain the benefits of a world-class data center infrastructure without the expense.

Web-Hosting Services

FIS provides Web-hosting services to meet the needs of your e-commerce and online businesses. By providing high availability and security to support your e-business with world-class technology experts and infrastructure, FIS can partner with you in your Web business.

Managed Hosting Services

FIS' managed hosting services include the data center, network, security, storage, service desk and managed application services. Service-level agreements ensure your business needs are met and the FIS commitment to quality will exceed your expectations.

- Data Center Management – FIS actively manages your data center operations, including hardware, operating systems, peripherals and service availability.
- Networking Services – FIS provides a full range of network solutions that utilize leading products and key technologies to meet your business needs. FIS designs the network, supports the logistics, and implements and delivers an efficient, optimized network.
- Security Services – FIS delivers the integrity, confidentiality, availability and control of both your company and your customer data.
- Service Desk – FIS provides your business with a single point of contact for requests, problems and general information.

FIDELITY NATIONAL
INFORMATION SERVICES

- Storage Services – FIS provides the adaptability, cost-efficiency and resilience needed to support the changing needs of your business. FIS supports your end-to-end storage and data needs from assessment through implementation and ongoing management.
- Disaster Recovery and Business Continuity – FIS assesses and manages the possible risks in the face of a business disruption or disaster at the data center. In addition, FIS will design and periodically test a disaster recovery plan.
- Managed Application Services – FIS creates, supports and enhances existing applications to help you obtain the business functionality you need. In addition, FIS manages the configuration, customization, operation, upgrade and bug/patch administration, database administration and other related services for your software applications.
- With superior technology professionals and multiple data centers across the country, FIS Hosting Services can provide you with the tools, expertise and infrastructure, so you can focus on your business and its strategies.

The Power Behind the Solution

With superior technology professionals and multiple data centers across the country, FIS is poised to meet each client's needs. FIS processes more than 50 percent of outstanding U.S. mortgages each day, more than 23 million financial accounts each day and more than 3 million transactions per hour. FIS provides services remotely or onsite, worldwide. As a member of the Standard & Poor's (S&P) 500® Index, FIS has been ranked the number one banking service provider in the world and the number two overall financial technology provider in the annual FinTech 100 rankings, sponsored by *American Banker* and the research firm Financial Insights.
