

FIS HEALTHCARE REMITTANCE MANAGER

FIS HEALTHCARE REMITTANCE MANAGER BENEFITS:

- Save money on traditional paper processing (up to 80 percent)
- Electronically process healthcare claims
- Eliminate the manual work of remittance advice data entry
- Reconcile remittance advices with individual payments
- Expedite filing of Secondary Billing for secondary payers and denials
- Improving accuracy by eliminating data entry errors
- Reduce customer service inquiries by providing faster payments

EOBS MADE EASIER WITH AUTOMATED AND ACCURATE PROCESSING

With **FIS Healthcare Remittance Manager**, healthcare providers can ensure reconciliation, accelerate payments, improve workflow and reduce costs associated with claims processing.

DECREASE CLAIM DENIALS, INCREASE CASH FLOW, AND CUT THE PAYMENT APPLICATION BACKLOG

FIS Healthcare Remittance Manager captures billing information either by traditional scanning, which converts documents into standardized EDI 835 files, or native EDI 835 files. **Regardless of original format, explanation of benefits (EOB) forms, checks, and supporting documentation are immediately available for payment posting.**

After claims transactions are captured, **FIS Healthcare Remittance Manager** reconciles data with the BAI (Banking Administration Institute) data file to ensure a transactional match. The resultant “clean” file can then be posted against discrete line items in the billing system. After posting is complete, detailed

index data is captured and associated with the supporting images and data files. This extensive index data makes finding a specific claim and remittance information fast, accurate and easy.

Any remittances that cannot be automatically posted will be “parked” in a workflow queue while notification is sent to the appropriate personnel for manual resolution and exception handling.

Standards driven integration capabilities allow for the automation of not only the payment posting process but also the generation of secondary claims on a daily basis. Secondary claims are automatically matched with the primary EOB and are made ready for printing and mailing to a secondary payor or the patient.

With **FIS Healthcare Remittance Manager**, you can access and view all EOBs, check images, and accompanying documentation online through a secure, browser-based tool providing immediate access to all supporting documents.

FIS Healthcare Remittance Manager manages all billing information to ensure regulatory compliance or internal policy while security and authentication capabilities enable HIPAA compliance and access audit trails.
